# TABLE OF CONTENTS

**PREFACE**

**TABLE OF CONTENTS** VI

**ABSTRACT** IX

**ACKNOWLEDGEMENTS** X

1. **INTRODUCTION**

2. **GEOLOGY OF EASTERN AUSTRALIA** 5

   2.1. **Introduction** 5

   2.2. **New England Orogen** 8

      2.2.1. Tablelands Complex 8

      2.2.2. Tamworth Belt 9

      2.2.3. Magmatic Arc 11

      2.2.4. Back-arc setting 12

   2.3. **Fault geometry** 12

   2.4. **Deformation** 13

3. **STRATIGRAPHIC GEOMETRY OF THE TAMWORTH BELT** 17

   3.1. **Documentation of stratigraphic units based on seismic reflection profiling** 17

      *Supplementary deep seismic data* 18

      *Depth conversion of the seismic reflection profiles* 19

      *Interpreted seismic reflections* 19

      *Two distinct sequence boundaries above the Tamworth Belt* 21

   3.1.1. Five Tamworth Belt reflections 21

   3.1.2. Defined Tamworth Belt sequences 23

   3.1.3. Representative seismic sections 25

      *Composite profile A82-LT-24 – H82-T-109 – BMR86.MO1* 25

      *A82-WR-21* 27

   3.2. **Comparison of defined units to existing stratigraphy** 28

      3.2.1. Palynology of previous studies 29

         *Defined Supersequences* 30
3.2.2. Supporting borehole-stratigraphy

Deep Crossing
Lithology and Wireline Logs
Comparing the borehole data to the seismic record

3.2.3. Stratigraphic geometry – short discussion

4. MAGNETIC AND GRAVITY ANOMALIES

4.1. Introduction

4.2. Aeromagnetic data

4.2.1. Aeromagnetic data – presentation

4.2.2. Aeromagnetic data – interpretation

4.2.2.1. Aeromagnetic data – interpretation of the southern NEO

Western Tamworth Belt

Eastern Tamworth Belt

4.2.2.2. Aeromagnetic data – interpretation of the study area

4.3. Gravity data

4.3.1. Gravity data – presentation

4.3.2. Gravity data – interpretation

Interpretation of the Southern New England Orogen

Interpretation of the study area

4.4. Aeromagnetic and gravity data – discussion

5. STRUCTURAL GEOMETRY OF THE TAMWORTH BELT

5.1. Fault geometries from seismic sections

5.1.1. Additional information from deep seismic profiling

5.1.2. Composite seismic profiles across the subsurface Tamworth Belt

Seismic sequences within the concealed Tamworth Belt

5.2. Fault Maps

5.2.1. Moonie Fault plane

5.2.2. Introducing another thrust horizon
5.3. Discussion

5.3.1. The concealed Tamworth Belt – post-depositional deformation
5.3.2. Defining the eastern limit of the subsurface Tamworth Belt
5.3.3. Structure of the concealed Tamworth Belt

The relationship between the Bowen Basin and the Tamworth Belt

5.3.4. The concealed Tamworth Belt – fault history
5.3.5. The concealed Tamworth Belt – fault orientation

5.4. Subsurface geometries from reprocessed data – a different approach

5.4.1. Reprocessed seismic data – BMR86.MO1 (Millmerran profile)
5.4.2 Reprocessed seismic data – BMR84.14

5.5. Seismic data – Discussion

Reactivation of faults
Faults of major importance
A second thrust sheet is identified
Subsidence history or tectonic evidence?
Configuration of the Tamworth Belt related to its evolution

5.5.1. Structural Geometry – conclusion

6. SYNTHESIS

Initiation of the fore-arc succession
Age control
Comparison with previous studies
Final statement

7. CONCLUSIONS
