

TABLE OF CONTENTS

Abstract	I
Kurzfassung	III
Résumé	V
Acknowledgments	VII
Table of Contents	VIII
List of Figures and Tables	XIII
Notation	XXIII
1 Introduction	1
1.1 IMPETUS project.....	1
1.2 Context and aim of the study.....	2
1.3 Strategies of investigations.....	2
2 Characterization of the area under Investigation	5
2.1 The Drâa valley	5
2.2 IMPETUS meteorological stations and test sites.....	6
2.3 Climatic conditions.....	7
2.4 Hydrological features.....	10
2.5 Geological overview	12
3 Methods of investigation	15
3.1 Overview.....	15
3.2 Hydrogeological investigations	15
3.2.1 Geological investigations	15
3.2.2 Groundwater and surface water sampling.....	15
3.2.3 Rain and snow sampling.....	18
3.2.4 Hydrogeochemical analyses.....	18
3.2.5 Interpretation of the hydrogeochemical data.....	20
3.2.6 Digital elevation model of the Upper Drâa catchment.....	21
3.2.7 Discharge and water level measurements.....	21
3.2.8 Water budget	21
3.3 Environmental Isotopes.....	21
3.3.1 Stable isotopes	21
3.3.1.1 Isotope ratios.....	22
3.3.1.2 Deviation value (δ), standards.....	22
3.3.1.3 Isotopes fractionation	22
3.3.1.4 Kinetic and equilibrium isotope fractionations	23
3.3.1.5 Temperature effect on fractionation	23
3.3.1.6 The Rayleigh process	24
3.3.1.7 Oxygen-18 and Deuterium.....	24
3.3.1.8 Carbon-13	28

3.3.2	Radioactive isotopes.....	30
3.3.2.1	Equation of radioactive decay	30
3.3.2.2	Tritium	31
3.3.2.3	Carbon-14	31
3.4	Modelling	34
3.4.1	Groundwater dating using lumped-parameter approach	34
3.4.2	The three-dimensional finite-difference groundwater flow model PMWIN5	36
3.4.2.1	Overview	36
3.4.2.2	Equations considered in the model program.....	37
3.4.2.3	Conception of a model	38
3.4.2.4	The water budget calculator.....	39
3.4.2.5	Calibration, validation and sensitivity analysis	39
4	Geology of the Drâa catchment	41
4.1	Introduction	41
4.2	General Features.....	41
4.2.1	The Anti Atlas	41
4.2.2	The High Atlas	41
4.2.3	The Basin of Ouarzazate	44
4.3	Litho-stratigraphic description.....	46
4.3.1	The Precambrian	46
4.3.2	The Paleozoic	48
4.3.3	The Mesozoic	49
4.3.4	The Cenozoic.....	52
4.4	Tectonic features	56
4.4.1	The main fault systems of the Upper and Middle Drâa catchment	56
4.4.2	Tectonic features of the Upper Drâa catchment	57
5	Water balance of the Assif-n'Ait-Ahmed and Ifre catchments	61
5.1	Introduction	61
5.2	Water balance of the Assif-n'Ait-Ahmed catchment (2002)	61
5.2.1	Characterization of the catchment	61
5.2.2	Estimation of the total precipitation: snow and rain.....	62
5.2.3	Estimation of the evapotranspiration.....	63
5.2.4	Discharges of the Assif-n'Ait-Ahmed Wadi and springs.....	64
5.2.5	Water balance.....	65
5.3	Water balance of the Ifre catchment (2002-2003)	66
5.3.1	Characterization of the catchment	66
5.3.2	Estimation of the total precipitation.....	66
5.3.3	Estimation of the evapotranspiration.....	66
5.3.4	Discharge and base flow component of the M'Goun Wadi	66
5.3.5	Water balance.....	67
5.4	Conclusion.....	68

6	Isotopes of the water molecule in recharge processes.....	69
6.1	Introduction.....	69
6.2	Stable isotopes (^2H and ^{18}O) as natural tracers.....	69
6.2.1	Climatic conditions at the IMPETUS meteorological stations.....	69
6.2.2	Local Meteoric Water Line (LMWL).....	70
6.2.3	Seasonal variation.....	71
6.2.4	Isotopic characterization of extreme rain events.....	72
6.2.5	Isotopic characterization of snow.....	74
6.2.6	Local altitude gradient of $\delta^{18}\text{O}$ for precipitation.....	76
6.2.7	Relation between $\delta^{18}\text{O}$ and groundwater mean recharge altitude.....	78
6.3	The radionuclide tritium (^3H) as a time marker.....	79
6.3.1	Tritium in precipitation as an input function.....	79
6.3.2	Interpretation of the tritium data of the groundwater.....	80
6.4	Conclusion.....	82
7	Hydrogeology of the Jbel Sagrho and of the High Atlas.....	85
7.1	Introduction.....	85
7.2	The Jbel Sagrho.....	85
7.2.1	Hydrogeochemical characterization of the groundwater.....	85
7.2.2	Isotopic characterization.....	86
7.3	The High Atlas.....	87
7.3.1	The Assif-n'Ait-Ahmed catchment.....	87
7.3.1.1	Hydrogeological overview.....	87
7.3.1.2	Hydrogeochemical characterization of the groundwater.....	89
7.3.1.3	Hierarchical Cluster Analysis (HCA).....	90
7.3.1.4	Principal Component Analyse.....	97
7.3.1.5	Saturation Index.....	98
7.3.1.6	Important process during the underground passage.....	100
7.3.1.7	Stable Isotopes.....	100
7.3.1.8	Tritium.....	103
7.3.1.9	Hydrogeological conceptual model of the Assif-n'Ait-Ahmed catchment.....	103
7.3.2	The Ifre catchment.....	104
7.3.2.1	Hydrogeological overview.....	104
7.3.2.2	Hierarchical Cluster Analyses.....	107
7.3.2.3	Principal Component Analyse.....	110
7.3.2.4	Saturation Index.....	110
7.3.2.5	Stable isotopes.....	111
7.3.2.6	Tritium.....	113
7.3.3	Skoura mole and Dades canyon.....	114
7.3.4	Hydrogeological conceptual model of the High Atlas aquifer system.....	115
7.3.5	Comparison of the Anti Atlas (Jbel Sagrho) and the High Atlas.....	116

8 Hydrogeology of the Basin of Ouarzazate	119
8.1 Introduction	119
8.2 Hydrogeological overview.....	119
8.2.1 Shallow aquifers	120
8.2.2 Semi-deep aquifer of the Mio-Pliocene.....	121
8.2.3 Eocene and Cretaceous aquifers.....	121
8.3 Groundwater table	122
8.4 Hydrogeochemical characterization of the groundwater.....	125
8.4.1 Regional variability of the mineralization.....	125
8.4.2 Hierarchical Cluster Analysis	126
8.4.3 Principal Component Analysis	131
8.4.4 Surface water chemistry	131
8.4.5 Hydrogeochemistry of the groundwater in the Basin of Ouarzazate.....	133
8.4.6 Saturation Index.....	141
8.5 Stable Isotopes.....	144
8.5.1 Isotopic composition of the groundwater	144
8.5.2 Estimation of the mean altitude of the groundwater recharge area	147
8.6 Tritium.....	148
8.7 Dating of groundwater with ¹⁴ C.....	150
8.8 Conclusion.....	153
9 Groundwater modelling of the Basin of Ouarzazate	157
9.1 Introduction	157
9.2 Model design	157
9.2.1 Localisation and overview of the model domain	157
9.2.2 Model geometry and boundary conditions.....	157
9.2.3 Model parameters.....	159
9.2.4 Wadis and Rivers.....	161
9.2.5 Major model assumptions	161
9.3 Results.....	162
9.4 Conclusion of the modelling	169
10 Hydrogeological results and implication in IMPETUS investigation.....	171
10.1 Sustainability in water resources management	171
10.2 Groundwater resources of the Upper Drâa catchment.....	171
10.2.1 Main features of the aquifer systems.....	172
10.2.2 Hydrogeochemical characterization.....	174
10.2.3 Recharge processes and origin of groundwater	176
10.2.4 Residence time	179
10.2.5 Numerical model of the alluvial aquifers of the Basin of Ouarzazate.....	180
10.3 Outlook.....	180
References.....	183

Appendices (CD)

- Appendix 1: Coordinates and physico-parameters of the collected water samples (groundwater and surface water).
- Appendix 2: Results of hydrogeochemical analysis and calculated values of saturation indexes.
- Appendix 3: Results of stable isotopes analyses (^{18}O and ^2H) of rain sampled between 2002 and 2004.
- Appendix 4: Results of stable isotopes analyses (^{18}O and ^2H) of 34 samples of snow sampled between April 2002 and March 2004 in the High Atlas (area of M'Goun).
- Appendix 5: Results of tritium analyses (50 samples) and carbon-14 analyses (10 samples) of groundwater in the Upper Drâa catchment during autumn 2002 (IMP5).
- Appendix 6: Lithological description of boreholes (in French) in the basin of Ouarzazate (source: DRH).
- Appendix 7: Setting of the groundwater modelling with MODFLOW PWIN5: Model 1 and Model 2.
