

Contents

Notation	vi
1 Introduction	1
1.1 Simulations with Geometrically Complicated Interfaces	1
1.2 Biomechanics of Bone Microstructures	2
1.3 Review of Related Simulation Methods	4
1.4 Composite Finite Elements	7
1.5 Image Data Acquisition and Domain Preprocessing	7
1.6 A Brief Review of Multilevel and Multigrid Methods	9
1.7 Homogenization	10
1.8 Outline	11
2 Model Problems and Interfacial Coupling Conditions	13
2.1 Heat Diffusion	13
2.2 Linear Elasticity	14
2.3 Coupling Conditions Across Interfaces	19
3 Construction of Composite Finite Elements	27
3.1 Hexahedral Voxel Grids and Local Auxiliary Meshes	28
3.2 CFE for Complicated Domains	36
3.3 CFE for Discontinuous Coefficients	40
3.4 Boundary Conditions	56
3.5 CFE Discretization and Matrices	57
4 Numerical Homogenization	63
4.1 Homogenization for Periodic Specimens	65
4.2 Homogenization for Statistically Periodic Specimens	73
4.3 Composite Finite Element Discretization	76
4.4 Solvers for the Constrained Systems	82
4.5 Orthotropy Directions	83
5 Multigrid Solvers for Composite Finite Elements	87
5.1 Geometric Coarsening	87
5.2 Multigrid Coarsening for Complicated Domains	90
5.3 Homogenization Multigrid Solvers (Complicated Domains)	94
5.4 Multigrid Coarsening for Discontinuous Coefficients	96

6	Algorithms and Implementation	97
6.1	Global Indexing	98
6.2	Virtual Meshes and CFE Basis Functions	98
6.3	Data Vectors and Composite Finite Element Matrices	105
6.4	Iterative and Multigrid Solvers	108
7	Numerical Results and Applications	109
7.1	Numerical Tests	109
7.2	Heat Diffusion Simulations	121
7.3	Linear Elasticity Simulations	127
7.4	Homogenization	136
8	Conclusions and Outlook	147
8.1	Summary and Open Problems	147
8.2	Ideas for Improved Coarsening for Complicated Domains	149
8.3	Ideas for a Discontinuous Coefficients Coarsening Procedure	151
	Bibliography	155
	Index	175
