List of Tables xv

1 Introduction 1

1.1 The Musculature ....................................................... 1
  1.1.1 Vertebrate Skeletal Muscle ......................................... 1

1.2 Skeletal Muscle Development ........................................... 4
  1.2.1 Embryonic development ............................................. 4
  1.2.2 Myogenesis ............................................................ 5
    1.2.2.1 Embryonic Myogenesis ........................................... 5
    1.2.2.2 Fetal Myogenesis ............................................... 5
    1.2.2.3 Adult Myogenesis ............................................... 6
    1.2.2.4 Sarcomerogenesis ............................................... 7

1.3 Skeletal Muscle Regeneration .......................................... 8

1.4 Skeletal Muscle remodelling ........................................... 10

1.5 Sarcomere Structure .................................................. 11
  1.5.1 Thin Filaments ...................................................... 11
  1.5.2 Thick Filaments .................................................... 13
  1.5.3 Nebulin ............................................................... 14
  1.5.4 Nebulette ............................................................ 15
  1.5.5 The Z-disc ........................................................... 16
    1.5.5.1 α-Actinin ....................................................... 17
    1.5.5.2 Filamin C ....................................................... 18
  1.5.6 The M-Band ......................................................... 20

1.6 The Myotendinous Junction ............................................ 21

1.7 Costameres .............................................................. 21
## CONTENTS

1.8 The Heart .......................................................... 23
  1.8.1 Heart Development ........................................ 23
  1.8.2 Cardiomyocytes ........................................... 24
1.9 Cellular Junctions .............................................. 26
  1.9.1 Cadherins .................................................. 26
    1.9.1.1 β-Catenin ........................................... 29
  1.9.2 Integrins .................................................. 30
  1.9.3 Vinculin ................................................... 32
  1.9.4 Talin ....................................................... 33
1.10 Xin-Repeat Proteins .......................................... 34
1.11 Aim of the Study .............................................. 37

2 Material and Methods ........................................... 39
  2.1 Chemicals ..................................................... 39
  2.2 Culture Media ................................................ 39
  2.3 Antibiotics .................................................... 40
2.4 Bacterial and Yeast Strains ................................. 40
  2.4.1 Cloning ..................................................... 40
  2.4.2 Protein Expression ....................................... 40
  2.4.3 Yeast Two-Hybrid System ............................... 40
2.5 Vectors and cDNA Libraries ................................ 40
  2.5.1 Protein Expression Vectors ............................ 41
    2.5.1.1 pET23aEEF ......................................... 41
    2.5.1.2 pET23aT7 ............................................ 41
    2.5.1.3 pET23aMyc .......................................... 41
    2.5.1.4 pET28a ............................................... 41
    2.5.1.5 pGEX-6P-3 ........................................... 41
  2.5.2 Vectors for Eukaryotic Protein Expression ........... 42
    2.5.2.1 Venus NT ............................................. 42
    2.5.2.2 Venus CT ............................................. 42
    2.5.2.3 Venus1-C ............................................ 42
    2.5.2.4 Venus2-C ............................................ 42
    2.5.2.5 Venus1-N3 .......................................... 43
    2.5.2.6 Venus2-N3 .......................................... 43
  2.5.3 Vectors for Yeast Two-Hybrid Assays .................. 43
CONTENTS

2.8.1 Immunodetektion ........................................... 55
  2.8.1.1 Quantitative Analysis ................................. 55
  2.8.1.2 Qualitative Analysis ................................. 56
2.8.2 Antibodies ................................................ 56
  2.8.2.1 Purification of Polyclonal Antibodies ............... 56
2.8.3 Frozen Tissue Sections ................................. 59
2.8.4 Immunostaining of Cells and Tissues .................... 60
  2.8.4.1 Paraformaldehyde Fixation ......................... 60
  2.8.4.2 Methanol-Acetone Fixation ....................... 61
  2.8.4.3 Staining ............................................. 61
2.9 Protein Interaction Assays ................................. 62
  2.9.1 Yeast Two-Hybrid System ............................... 62
    2.9.1.1 Sequential Transformation ...................... 62
    2.9.1.2 Test of Activation of the \( \text{HIS3} \) Reporter Gene .. 63
    2.9.1.3 Test of \( \beta \)-Galactosidase Activity .......... 63
  2.9.2 Co-Immunoprecipitation ............................... 64
  2.9.3 Chemical Cross-linking ................................ 64
  2.9.4 Peptide Scan ........................................... 65
  2.9.5 Bimolecular Fluorescence Complementation (BiFC) Analysis . 65
2.10 Cell Culture ................................................ 67
  2.10.1 Cell Lines ............................................. 68
    2.10.1.1 H-2K\(^b\)-tsA58 Cells ......................... 68
    2.10.1.2 A7R5 Cells .................................... 68
  2.10.2 Cell Thawing ........................................... 69
  2.10.3 Cell Passaging ........................................ 69
  2.10.4 Cell Freezing ......................................... 69
  2.10.5 Isolation of Embryonic Mouse Cardiomyocytes .......... 70
  2.10.6 Transient Transfections .............................. 70
    2.10.6.1 TurboFect Transfection ....................... 70
    2.10.6.2 Electroporation of Embryonic Mouse Cardiomyocytes .. 71
2.11 Microscopy .................................................. 71
  2.11.1 Transmitted Light Microscopy ......................... 71
    2.11.1.1 Epi-fluorescence Microscopy ................... 71
    2.11.1.2 Confocal Laser Scanning Microscopy ........... 73
    2.11.1.3 Fluorescence Recovery After Photobleaching (FRAP) .. 73
3 Results

3.1 In vitro Myofibrillogenesis of Murine H-2K\textsuperscript{b}-tsA58 Cells 77
   3.1.1 Sarcomere Development 79
      3.1.1.1 Early Phase (Day 1–2) 80
      3.1.1.2 Intermediate Phase (Day 3–4) 84
      3.1.1.3 Late Phase (Day 5–8) 87
   3.1.2 Expression Profile of Sarcomeric Proteins 91

3.2 Murine Xin in H-2K\textsuperscript{b}-tsA58 Myoblasts During Myofibrillogenesis 94
   3.2.1 Transcription of Murine Xin During Myofibrillogenesis of H-2K\textsuperscript{b}-tsA58 Cells 94
   3.2.2 Protein Expression of Murine Xin During Myofibrillogenesis of H-2K\textsuperscript{b}-tsA58 Cells 97
   3.2.3 Xin Localization During In vitro Myofibrillogenesis of Murine H-2K\textsuperscript{b}-tsA58 Cells 100
      3.2.3.1 Xin and \(\alpha\)-Actinin 100
      3.2.3.2 Xin and Filamin C 102
      3.2.3.3 Xin and Nonmuscle Myosin IIA 104
      3.2.3.4 Xin and \(\beta\)-Catenin 107
      3.2.3.5 Xin Isoforms 107

3.3 Xin is a Novel Ligand of the SH3 Domain of Nebulin and Nebulette 110
   3.3.1 Xin A and C Interact with Nebulin 111
   3.3.2 Human Xin also Binds to Nebulette 112
   3.3.3 Biochemical Verification of the Nebulin/Nebulette-Xin Interaction 114
   3.3.4 Identification of the Nebulin/Nebulette SH3 Domain Binding Sequence in Human Xin 115
   3.3.5 Xin and Nebulin Localization During Myofibrillogenesis of H-2K Cells 117
   3.3.6 The Site of Xin and Nebulette Interaction Visualized by Bimolecular Fluorescence Complementation (BiFC) 124

3.8.2 Xin-Repeat Proteins and Nebulin in Structures of Human Skeletal Muscle Remodelling ........................................... 208
3.8.3 Xin-Repeat Proteins and Filamin C in Structures of Human Skeletal Muscle Remodelling ........................................... 214

4 Discussion ............................................................................. 218
4.1 Myofibrillogenesis of Murine H-2Kb-tsA58 Cells ................. 218
4.2 Xin-Repeat Proteins During In Vitro Myofibrillogenesis of Murine H-2Kb-tsA58 Cells ...................................................... 221
  4.2.1 Transcription and Expression of Xin Isoforms .................... 221
  4.2.2 Localization of Xin Isoforms ........................................... 223
4.3 Xin-Repeat Proteins Are Novel Ligands of the SH3 Domain of Nebulin and Nebulette ....................................................... 225
  4.3.1 The Site of Interaction of Xin-Repeat Proteins with Nebulin/Nebulette Interaction ..................................................... 228
  4.3.2 Evolutionary Conservation of the Nebulin/Nebulette Binding Motifs in Xin-Repeat Proteins ........................................ 231
4.4 Xin-Repeat Proteins and Skeletal Muscle Remodelling .......... 234
4.5 LIMCH1 – The First Xin A-Specific Binding Partner ............... 237
  4.5.1 Expression of LIMCH1 Isoforms in Cells and Tissues .......... 238
  4.5.2 Oligomer Formation of LIMCH1 ..................................... 240
  4.5.3 Dissection of Functional Domains in LIMCH1 .................. 241
  4.5.4 The Site of Xin–LIMCH1 Interaction ............................... 241
  4.5.5 The Potential Role of the Xin–LIMCH1 Interaction ............ 243
4.6 Xin and Xirp2 – Overlapping and Distinct Function ............... 243
4.7 Xirp2 Orientation and Interactions Within the Sarcomeric Z-disc - Implications for Z-disc Structure ................................ 247

Bibliography ............................................................................. 252
