Table of contents

1 General introduction 1

1.1 Problem statement and research objective 4
1.2 Methodological background 5
1.3 Structure of the thesis 7

2 Determining the trade impact of regulatory measures 9

2.1 Economic specification of the gravity model 11
2.2 Econometric application of the gravity model 19
2.3 Conclusion of the chapter 38

3 Regulatory policies in meat trade: Is there evidence for least trade-distorting sanitary regulations? 40

3.1 Theory and methodology 41
3.2 Data 44
3.2.1 The SPS data base 44
3.2.2 Other model data 53
3.3 Results and specification tests 55
3.4 Conclusion of the chapter 58

4 Determining the welfare impact of regulatory measures 60

4.1 Economic specification: Takayama-Judge versus Armington 62
4.2 Economic application: Including costs and benefits of regulations 64
4.2.1 Supply side: Modeling costs and benefits of regulations 64
4.2.2 Demand side: Modeling costs and benefits of regulations 66
4.3 Conclusion of the chapter 68

5 Impact of avian influenza-related policy measures on poultry meat trade and welfare 70

5.1 Methodology and data 72
5.1.1 Trade flow analysis using a gravity model 72
5.1.2 Welfare analysis using a spatial partial equilibrium model 77
5.1.3 Avian influenza policy scenario definitions 85

5.2 Results 86
5.2.1 Trade impact results using the gravity model 86
5.2.2 Welfare results using the spatial partial equilibrium model 89
5.3 Conclusion of the chapter 97

6 Conclusions of the thesis 99

6.1 Summary of results 99
6.2 Limitations and suggestions for further research 103
6.3 Concluding remarks 104
