## Contents

1 Introduction  
1.1 The Project FEPROeXPRESS  
1.2 State of research  
  1.2.1 Development of the 'Thrifty Phenotype Hypothesis'  
  1.2.2 Concept of 'Fetal Programming'  
  1.2.3 Questions regarding survival strategies of malnourished fetuses and offspring  
  1.2.4 Animal models investigating the 'Thrifty Phenotype Hypothesis'  
  1.2.5 Pig as an animal model  
  1.2.6 Experimental protein diets in a porcine model  
1.3 Aims  

2 Publications  
2.1 Summary of publications  
2.2 A high protein diet during pregnancy affects hepatic gene expression of energy sensing pathways along ontogenesis in a porcine model. *Plos One*, 2011, 6(7), e21691  
2.3 A low protein diet during pregnancy provokes a lasting shift of hepatic expression of genes related to cell cycle along ontogenesis in a porcine model. *BMC Genomics*, 2012, 13(1), 93  
2.4 A gestational high protein diet affects the abundance of muscle transcripts related to cell cycle regulation throughout development in porcine progeny. *Plos One*, 2012, 7(4), e34519  
2.5 Transcriptional response of skeletal muscle to low protein gestation diet in porcine progeny accumulates in growth- and cell cycle-regulating pathways. *Physiol Genomics*, 2012, 44(16), 811-8
3 Discussion 65

3.1 Advantages and disadvantages of methods used in the microarray workflow 65

3.1.1 Quality control, normalisation and filtering of microarray data 66

3.1.2 Statistical parameters and thresholds 66

3.1.3 Annotation and biological interpretation tools 68

3.2 Similarities and differences of the statistical analyses of liver and skeletal muscle tissue 68

3.3 Diet-dependent transcriptional excursions in liver and skeletal muscle tissue along ontogenesis including pre- and postnatal time points 69

3.3.1 No persistent diet-specific regulations were found among ontogenesis 73

3.3.2 Diet-dependent regulations of probe-sets in liver and skeletal muscle tissue 73

3.3.3 Diet-dependent regulations of relevant pathways 75

3.3.4 Tissue-dependent regulations of relevant pathways 75

3.3.5 Stage-dependent regulations of relevant pathways 76

3.3.6 Impact of other factors 77

3.4 Implications and Outlook 79

4 Summary 81

List of Figures 85

List of Tables 87

Bibliography 89

A Enclosure 1 VII

A.1 List of abbreviations VIII

A.2 Composition of diets XIII

B Enclosure 2 XVII

B.1 Acknowledgement XVIII

B.2 Declaration XIX
