# Contents

## I Rigidity Properties in Inverse Problems  

1 Introduction  

2 Backward Uniqueness Properties  

2.1 Introduction  

2.2 Review: Definitions, Basic Properties and Examples  

2.3 Heuristics for the BUP  

2.4 Statement of the Main Results  

2.5 Elliptic Carleman Estimates and Consequences  

2.6 Parabolic Carleman Estimates  

3 The Fractional Laplacian and the UCP  

3.1 Introduction  

3.2 Review: Unique Continuation and Carleman Estimates  

3.3 The Fractional Laplacian  

3.4 The Main Results  

3.5 The Weak Unique Continuation Property  

3.6 Symmetric Carleman Estimates  

3.7 Doubling and the WUCP  

3.8 The One-Dimensional Situation  

3.9 Improved Integrability: The Half-Laplacian  

3.10 Variable Coefficients  

## II The Cubic-to-Orthorhombic Phase Transition  

4 Introduction  

4.1 The Model  

4.2 Heuristics  

5 Non-Rigidity  

5.1 Introduction  

5.2 The Main Results  

5.3 Preliminaries  

5.4 Constructions  

5.5 Controlled Convergence Lemma  

5.6 Proof of the Propositions  

6 Rigidity  

6.1 Introduction  

6.2 The Main Results  

6.3 Preliminaries  

6.4 A Regularity Result
