1	Introduction	11
I	Theoretical Part	13
2	Memory systems	13
3	Memory consolidation	15
3.1	Origins and development	15
3.2	Interference and forgetting	16
4	The neural correlates of memory consolidation	19
4.1	Synaptic consolidation	19
4.2	System consolidation	20
4.2.1	Patient H.M.	20
4.2.2	Lesion studies in rodents	21
4.2.3	Beyond the medial temporal lobe	22
4.3	The standard model of memory formation	24
4.4	Why do memories have to be consolidated at all?	25
5	Sleep	27
5.1	Physiology of sleep	27
5.2	Effect of sleep on memory consolidation	29
5.2.1	Behavioral findings	29
5.2.2	Neuroscientific findings	32
6	Neuronal replay as a mechanism for consolidation	35
6.1	Evidence from rodent studies	35
6.2	Studies in humans	35

7	Neuroimaging methods	37
7.1	Functional magnetic resonance imaging	37
7.1.1	Background	37
7.1.2	The BOLD response	37
7.1.3	Traditional analysis methods	38
7.1.4	Multi-variate approaches	39
7.2	Electrophysiological methods	39
7.2.1	Electroencephalography (EEG)	39
7.2.2	Intracranial EEG	40
7.2.3	Simultaneous EEG and fMRI	41
7.2.4	Time-frequency analysis	43
8	Multi-variate pattern analysis	45
8.1	Development of multi-variate approaches	45
8.2	What is Pattern Classification?	46
8.3	Terminology	47
8.4	Basic steps of pattern classification	50
8.5	Pattern classification algorithms	52
8.5.1	Linear Support Vector Machines	52
8.5.2	Sparse multi-nomial logistic regression	53
9	Summary and goal of this thesis	55
II	Empirical Part	57
10	Replay of stimulus-specific neuronal activity during resting state and sleep	59
10.1	Introduction	59
10.2	Methods	60
10.2.1	Participants	60
10.2.2	Stimuli	60

10.2.3	Design	62
10.2.4	Functional magnetic resonance imaging	65
10.2.5	Electroencephalographic recording and sleep staging	65
10.2.6	Multi-variate pattern classification	66
10.2.7	Classifier accuracy	66
10.2.8	Evaluating classifier predictions for objects from Set1 and Set2	67
10.2.9	Relating classifier predictions to memory performance	68
10.3	Results	69
10.3.1	Sleepstaging	69
10.3.2	Behavioral results	69
10.3.3	Pattern classification accuracy	70
10.3.4	Pattern classifier predictions for Set1 versus Set2 objects	71
10.3.5	Association of classifier votes with memory performance	73
10.4	Discussion	75
10.4.1	Relationship to previous studies on replay	77
11	Replay of neuronal activity associated with emotional stimuli	81
11.1	Introduction	81
11.1.1	Changes in experimental design	82
11.1.2	Investigation of regions of interest	83
11.2	Methods	84
11.2.1	Participants	84
11.2.2	Paradigm and Stimulus Material	84
11.2.3	fMRI scanning and preprocessing	88
11.2.4	Pattern classification	89
11.2.5	Classifier predictions on resting state	89
11.2.6	Relationship between classifier predictions and memory performance	90
11.2.7	Regional analysis	91
11.3	Results	92

11.3.1 Behavioral results	92
11.3.2 Classifier accuracy	95
11.3.3 Ratio of negative items during the resting state	95
11.3.4 Relationship between classification frequency and memory performance	96
11.3.5 Regional analyses	98
11.3.6 Cross-participant analyses	101
11.4 Discussion	101
11.4.1 Classifier performance	102
11.4.2 Ratio of predictions for negative items	102
11.4.3 Relationship between classifier predictions and behavior	102
11.4.4 Regional analyses	103
11.4.5 Lack of behavioral effects	104
11.4.6 Reasons for apparent preplay	105
11.4.7 Outlook	106
12 Replay of stimulus-specific activity in intracranial EEG	109
12.1 Introduction	109
12.2 Material and Methods	109
12.2.1 Participants	109
12.2.2 Paradigm and Stimuli	110
12.2.3 Recording and initial filtering of intracranial EEG data	112
12.2.4 Automated artifact correction	112
12.2.5 Selection of electrodes	115
12.2.6 Frequency band decomposition	116
12.2.7 Feature selection	118
12.2.8 Classifier training	121
12.2.9 Cross-validation	121
12.2.10 Classifier predictions on the nights	121
12.2.11 Surrogate classifiers	122

12.2.12	Sleep staging	123
12.2.13	Relationship with behavior	123
12.3	Results	124
12.3.1	Behavioral results	124
12.3.2	Sleepstaging	124
12.3.3	Classifier accuracy	125
12.3.4	Probability difference	128
12.3.5	Relationship with behavior	133
12.4	Discussion	134
12.4.1	Choice of classification algorithm	136
12.4.2	Feature selection and classifier accuracy	136
12.4.3	Probability difference	137
12.4.4	Relationship with sleep stages	139
12.4.5	Relationship with behavior	140
12.4.6	Critical review of the study and outlook	141
13	General discussion	143
13.1	Comparison of the three empirical studies	143
13.1.1	Classifier accuracy	143
13.1.2	Association with behavior	144
13.1.3	Comparison to control condition	144
13.1.4	The role of sleep	145
13.2	Discussion of the MVPA approach	145
13.3	Future directions	147
13.4	Summary	148
14	Abstract	149

15 German Summary (Deutsche Zusammenfassung)	151
15.1 Einleitung	151
15.2 Zusammenfassung von Studie 1	154
15.2.1 Hintergrund	154
15.2.2 Methoden	154
15.2.3 Ergebnisse	155
15.2.4 Fazit	156
15.3 Zusammenfassung von Studie 2	156
15.3.1 Hintergrund	156
15.3.2 Methoden	157
15.3.3 Ergebnisse	157
15.3.4 Fazit	158
15.4 Zusammenfassung von Studie 3	158
15.4.1 Hintergrund	158
15.4.2 Methoden	159
15.4.3 Ergebnisse	159
15.4.4 Fazit	159
15.5 Abschließende Zusammenfassung	160
Glossary	161
Acronyms	165
List of Figures	167
List of Tables	169
