CHAPTER 1

FRAMING THE PROBLEM OF DIARRHEAL DISEASE IN VIETNAM: AN INTRODUCTION	1
1. Holistic views on a globally persistent disease	1
Discourse and context: Why diarrheal disease is not only a medical problem	1
Global efforts and omissions: why re-prioritising diarrhoea needs local relevance	3
2. Troubling diarrhoea: aetiologies and prevention	6
Infection pathways: a web of human and nature interactions	6
Challenges in the prevention of diarrhoea: the factor of human behaviour	7
3. Mekong Delta: diarrheal risks in an environment of intense hydro-social interaction and change	9
Economic growth, polluted water environments and growing health disparities	10
A blurry causality: water supply and sanitation and the control of diarrheal diseases	12
4. Study objectives and research approach	13

CHAPTER 2

A POLITICAL ECOLOGY OF DISEASE INFORMED BY CRITICAL MEDICAL ANTHROPOLOGY	16
1. Problematizing health	16
Humanities in health and the link with development	16
Re-conceptualizing health and disease	18
2. Theoretical grounds	20
Building on political ecologies of health	21
Borrowing from critical medical anthropology	23
3. Analytical fields	25
The politics of risk communication	25
The “epidemiology” of health messages	27
A framework of analysis	29

CHAPTER 3

FIELDWORK METHODOLOGY	32
1. The social side of disease through a mixed-methods approach	32
Abductive research strategy and the use of the case study	33
Methods of data collection and analysis	34
2. Location background: rural and urban case-studies	35
The rural communes of Phong Dien district	37
The urban ward of Cai Rang district	39
3. The field's character: social research challenges in Vietnam	41

CHAPTER 4

HEALTH AMIDST CHANGE	43
1. Declared policy objectives and contradictory realities in healthcare	43
Past achievements and the challenges ahead	43
A pyramid with weak foundations	45
The weaknesses reflected in preventive health	48
2. Reshaping access to public health	52
New rules and new players in the “game” of healthcare: the private sector	52
Loopholes in the health insurance scheme	53
Combined impacts of access inequality	57
3. Controlling epidemics in Vietnam	59
The status of infectious diseases and the distribution of diarrhoea	59
The disease reporting mechanism and the case of diarrhoea	62
4. Conclusions	65

CHAPTER 5

QUESTIONING THE PANACEA OF WATER SUPPLY AND SANITATION	67
1. A discursive jump: from infrastructure to health benefits	67
Water supply and sanitation vis-à-vis disease prevention	67
Seeing beyond “improved” indicators	70
2. Safe water access in the Delta: whose reality and whose delusion?	71
Rural supply schemes, urban water companies and the hampered alternatives	72
Reporting water supply: “hygienic” labels and data discrepancies	76
Water quality fluctuations from source to consumption	80
3. Cultural and structural constraints in sanitation	85
Sanitation types and blaming the “other” latrine	85
Implementing pro-poor programs for sanitation	90
4. Conclusions	95

CHAPTER 6

PREVENTING DIARRHOEA: FRAGMENTED POLICY AND THE LACK OF EMPOWERING HEALTH EDUCATION 97**1. Merging the gap between local and global approaches to diarrheal disease** 97

Vietnamese perceptions around health 97

The international “toolkit” against diarrhoea 99

2. Derelictions of prevention: fragmented measures and weak implementation 101

The “old story” of diarrhoea: de-prioritising and underestimating a widespread disease 101

Streets to industries: the multilevel challenge of food safety 103

Anti-diarrheal vaccination: an inaccessible and unknown solution 106

Diarrhoea and malnutrition: the disregarded links 107

Polluted hydro-environments and weaknesses in advocating personal hygiene 109

The lost chance for an integrated approach: the policy of “healthy and cultural villages” 110

3. Health education and the public communication of disease 111

The Vietnamese approach to health education 111

Directing funds, expertise and information 112

Content and quality of the produced messages 118

The hollow construction of a success story 124

4. Conclusions 126

CHAPTER 7

PRACTICES; PERCEPTIONS AND BEHAVIORS AROUND DIARRHEAL DISEASE IN URBAN AND RURAL HOUSEHOLDS 128**1. The complex diversity of water use and treatment** 128

Household water sources and water preferences 129

Drinking-water treatments 132

Water for daily use 135

A web of waterborne risks of disease 136

2. Sanitation realities 137

Household sanitation and community hygiene 137

Sanitation ideas and preferences 139

3. Identification of risks and local awareness around diarrheal disease 141

Where does diarrhoea come from? 142

Senses of water safety and hygiene 144

Identifying, preventing and treating diarrhoea 147

4. Conclusions 151

CHAPTER 8

DISCUSSION AND CONCLUSIONS	153
1. The interplay of factors shaping the risk of disease: a synthesis of findings	153
Health policy and the “normalisation” of diarrheal disease	154
Constructing sick identities of poverty and rurality	159
Perceptions and practices through an epidemiology of health messages	161
The politics of health risk communication	168
2. A political ecology of disease: theoretical implications	173
3. From discourse to incidence	177
