<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>1</b>	<b>RBF kernel-based stochastic collocation for two-phase flows</b>	<b>19</b>
<b>2</b>	<b>Uncertainty quantification</b>	<b>21</b>
2.1	Primer on probability theory . . . . .	21
2.2	Random PDE problems . . . . .	28
2.3	Function spaces of random PDE solutions . . . . .	29
2.4	Finite-dimensional noise assumption . . . . .	31
2.5	Uncertainty quantification for random PDEs . . . . .	35
<b>3</b>	<b>Model and application problems</b>	<b>37</b>
3.1	Problems with analytic solution . . . . .	37
3.2	Two-dimensional random-coefficient elliptic problems . . . . .	39
3.3	Random two-phase incompressible Navier-Stokes equations . . . . .	40
<b>4</b>	<b>RBF kernel-based stochastic collocation</b>	<b>51</b>
4.1	Stochastic collocation . . . . .	51
4.2	Reproducing kernel Hilbert spaces and native spaces . . . . .	52
4.3	Interpolation with kernels and error estimates . . . . .	55
4.4	Estimation of stochastic moments . . . . .	61
4.5	Auxiliary numerical methods . . . . .	63
4.6	Approximation errors . . . . .	74
4.7	Computational complexities . . . . .	77
4.8	Multi-GPU parallel implementation . . . . .	80
<b>5</b>	<b>Multi-GPU parallel solver for the two-phase Navier-Stokes equations</b>	<b>87</b>
5.1	Numerical treatment of the incompressible two-phase Navier-Stokes equations . . . . .	88
5.2	Efficient GPU implementation . . . . .	92
5.3	Multi-GPU parallelization . . . . .	95
5.4	Performance results . . . . .	98
<b>6</b>	<b>Numerical studies and empirical error coupling</b>	<b>107</b>
6.1	Convergence and performance studies . . . . .	107
6.2	Comparison to (sparse) spectral tensor product approximations . . . . .	125
6.3	Empirical error coupling analysis . . . . .	133

---

<b>II</b>	<b>Parallel preconditioning in uncertainty quantification</b>	<b>147</b>
<b>7</b>	<b>Local preconditioning for kernel approximation</b>	<b>149</b>
7.1	Quasi-interpolation by local Lagrange bases . . . . .	150
7.2	Preconditioning using local Lagrange bases . . . . .	152
7.3	Multi-GPU parallel implementation . . . . .	156
7.4	Numerical results and scalability . . . . .	160
<b>8</b>	<b>Algebraic multigrid for random PDE problems</b>	<b>171</b>
8.1	Algebraic multigrid overview . . . . .	172
8.2	Coarsening, interpolation and smoothing . . . . .	175
8.3	GPU-parallel implementation . . . . .	180
8.4	Numerical results . . . . .	182
8.5	Performance results . . . . .	186
8.6	Application to random PDE problems . . . . .	192
<b>III</b>	<b>Approximation and empirical analysis of fast decaying random PDEs</b>	<b>195</b>
<b>9</b>	<b>A-posteriori Karhunen-Loève covariance spectrum decay analysis</b>	<b>197</b>
9.1	Discretization by the Nyström method . . . . .	198
9.2	Lanczos method for eigenvalue decomposition . . . . .	199
9.3	Multi-GPU parallel implementation . . . . .	201
9.4	Numerical results and performance measurements . . . . .	202
<b>10</b>	<b>Anisotropic RBF kernel-based stochastic collocation</b>	<b>209</b>
10.1	Anisotropic RBF kernel interpolation . . . . .	210
10.2	Weighting in anisotropic RBF stochastic collocation . . . . .	212
10.3	Power function and approximation estimate . . . . .	213
10.4	Greedy adaptive method for optimal collocation points . . . . .	214
10.5	Implementation . . . . .	215
10.6	Numerical results . . . . .	216
<b>11</b>	<b>Conclusions</b>	<b>225</b>
	<b>Bibliography</b>	<b>229</b>
