

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Foundations</b>	<b>5</b>
2.1	Parametric Polymorphism and Free Theorems . . . . .	6
2.2	Effects and Monads . . . . .	8
2.2.1	Simulating State . . . . .	8
2.2.2	Monads . . . . .	11
2.3	Introduction to Functional-Logic Programming . . . . .	13
2.3.1	Logic Features . . . . .	13
2.3.2	Failure and Non-Strictness . . . . .	15
2.3.3	Sharing . . . . .	15
2.3.4	Type System . . . . .	17
<b>3</b>	<b>Understanding Idiomatic Traversals</b>	<b>19</b>
3.1	Idioms . . . . .	24
3.1.1	Monadic Idioms . . . . .	24
3.1.2	Other Idioms . . . . .	27
3.1.3	Idiom Laws . . . . .	30
3.1.4	Flattening Formula . . . . .	31
3.1.5	Idiom Morphisms . . . . .	34
3.2	Traversable Functors . . . . .	38
3.2.1	The Interface . . . . .	38
3.2.2	Expected Behavior . . . . .	40
3.2.3	Laws for the <code>Traversable</code> Class . . . . .	43
3.2.4	Some Consequences of the Laws . . . . .	46
3.3	Proving the Labeling Claim only using the Laws . . . . .	47
3.4	Finitary Containers . . . . .	51
3.4.1	Definition . . . . .	52
3.4.2	Finding a Set of Shapes . . . . .	54
3.4.3	Finding Another Set of Shapes . . . . .	55
3.5	The Representation Theorem . . . . .	57
3.5.1	The <code>Batch</code> Idiom . . . . .	59
3.5.2	Proof of the Representation Theorem . . . . .	65

3.6	Examples . . . . .	69
3.6.1	Proving the Labeling Claim using the Representation Theorem . .	69
3.6.2	Inversion Law . . . . .	70
3.6.3	Composition of Monadic Traversals . . . . .	73
<b>4</b>	<b>Reasoning about Lazy Functional-Logic Languages</b>	<b>75</b>
4.1	The Language CuMin . . . . .	81
4.1.1	Actual Simplifications . . . . .	82
4.1.2	The Data Typeclass . . . . .	82
4.1.3	Features Orthogonal to Nondeterminism . . . . .	85
4.1.4	Redundant Features of Curry . . . . .	86
4.1.5	Formal Specification of CuMin . . . . .	87
4.2	Operational Semantics . . . . .	89
4.2.1	Operational Semantics with Logic Variables . . . . .	89
4.2.2	Removing Logic Variables . . . . .	96
4.3	Denotational Semantics . . . . .	98
4.3.1	Preliminaries on Posets . . . . .	99
4.3.2	Semantics of Types . . . . .	100
4.3.3	Semantics of Terms . . . . .	100
4.4	Correctness . . . . .	103
4.5	Adequacy . . . . .	109
4.5.1	Medial Semantics . . . . .	110
4.5.2	Existence of Medial Derivations . . . . .	113
4.6	Translating CuMin into SaLT . . . . .	116
4.6.1	The Language SaLT . . . . .	116
4.6.2	Semantic Equivalence and Equational Reasoning . . . . .	120
4.6.3	The Translation Procedure . . . . .	122
4.6.4	Example . . . . .	126
4.7	Parametricity for SaLT . . . . .	128
4.8	Proving Free Theorems for CuMin . . . . .	132
4.8.1	Side Conditions . . . . .	132
4.8.2	The Standard Example . . . . .	134
4.8.3	Second Example . . . . .	137
4.8.4	Handling the Data Class . . . . .	138
4.9	Fold/Build Fusion for CuMin . . . . .	140
4.9.1	Deterministic Case . . . . .	140
4.9.2	Counter-Example to Naive Approach . . . . .	143
4.9.3	Statement and Proof . . . . .	145
<b>5</b>	<b>Conclusion and Outlook</b>	<b>148</b>
	<b>Figures</b>	<b>151</b>
	<b>Bibliography</b>	<b>155</b>
